DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 4-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Whitehouse (U.S. 3,927,796). Whitehouse teaches a closure apparatus, shown in figures 1-6, having a cap portion at 26 and a handle at 34. The peripherally depending side wall is shown at lead line 26 in figure 1 and the radially inwardly extending peripheral lip is element 32. The lip 32 is considered a peripheral lip because it is an element of the periphery and extends from the periphery of the closure.

Allowable Subject Matter

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments filed June 5, 2003 have been fully considered but they are not persuasive. Applicant argues that Whitehouse fails to teach a closure apparatus that sealably secures a material housed in a container. Claim 1 is drawn to a closure and recites "wherein a material housed by said container is secured in said container by said cap portion" (lines 6-7). The container and material housed therein are not part of the claimed invention, since the claim is drawn to the closure

only. It is submitted that the closure of Whitehouse can perform the intended function when placed on an appropriately sized container without a valve which houses material having a particle size larger than any space between the closure side wall and bead of the container.

Claims 13 and 14 also set forth "wherein a material housed by said container is secured in said container by said cap portion. It is the examiner's position that Whitehouse also meets this limitation in claims 13 and 14. The material usually housed in the container of Whitehouse is a thick viscous material which is too thick to seep out between the side wall of the closure and the bead of the container. This material would be retained by the closure if the valve of the closure malfunctions and/or allows some material to escape.

Conclusion

5. **THIS ACTION IS MADE NON-FINAL.**

6. In order to reduce pendency and avoid potential delays, Group 3720 is encouraging FAXing of responses to Office Actions directly into the Group at (703)305-3579. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a USPTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into group 3720 will be promptly forwarded to the examiner.
